QUESTION 47

You have a computer that runs Windows 8, and three unused external disk drives.

You are creating a volume to store picture files. You have the following requirements:

- Use all three external disk drives.
- Ensure that the volume is accessible from a single drive letter.
- Ensure data redundancy between the disk drives in the event of a hardware failure.

You need to create the volume.

Which three actions should you perform in sequence?

(To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

Set the resiliency type to **Parity**.

Select the external hard drives.

Set the resiliency type to **None**.

Create a new storage pool.

Run the Disk Management tool.

Correct Answer:

Set the resiliency type to **Parity**.

Set the resiliency type to **None**.

Run the Disk Management

Select the external hard dr

Create a new storage pool.

QUESTION 48

A company has a main office and three branch offices. The company has 20 portable computers that run Windows 8. Portable computer users can install local devices while in any branch office.

Your manager has instructed you to collect information about faulty devices and drivers within the company's branch offices.

You need to create a performance report that includes a list of incorrectly installed devices by using the least amount of administrative effort.

What should you do?

- A. Add counters from each portable computer to Performance Monitor, and then print the Performance Monitor output.
- B. Start the System Diagnostics Data Collector Set on each portable computer.
- C. Create and start a custom Data Collector Set on each portable computer.
- D. Start the System Performance Data Collector Set on each portable computer.

Correct Answer: A

QUESTION 49

You manage client computers that run Windows 7 and Windows 8.

You are configuring Windows updates for all client computers. You have the following requirements:

- All client computers must use a specific Windows Server update Services (WSUS) server for updates.
- All client computers must check for updates each hour.

You need to configure local Group Policy settings to meet the requirements.

Which three actions should you perform? (Each answer presents part of the solution. Choose three.)

- A. Enable the Specify intranet Microsoft update service location policy setting.
- B. Enable the Configure Automatic Updates policy setting for automatic download and scheduled installation.
- C. Configure the Automatic Updates detection frequency policy setting.
- D. Configure the Automatic Maintenance Activation Boundary policy setting.
- E. Enable the Reschedule Automatic updates scheduled installations policy setting.

Correct Answer: ABC

QUESTION 51

You update the video card driver on a portable computer that runs Windows 8.

When a user connects the portable computer to an external monitor, the external monitor duplicates the display on the portable computer screen.

You need to ensure that the user can display additional desktop space on the external monitor.

What should you do?

- A. Start the computer from the Windows 8 installation media and perform a system image recovery.
- B. Roll back the video card driver to the previous version.
- C. Run the `sfc /scannow` command.
- D. Run the `DisplaySwitch /extend` command.

Correct Answer: D

QUESTION 52

A company has client computers that run Windows 8. Users store data on company-issued USB flash drives.

You establish that users are able to store data on personally owned USB flash drives.

You need to ensure that users can save data on company flash drives but not on personal flash drives.

What should you do?

- A. In the system properties for hardware, modify the device installation settings.
- B. In the local Group Policy, modify the device installation restrictions.
- C. Run Device Manager as an administrator
- D. Disable driver signature enforcement.

Correct Answer: B

QUESTION 53

A company has an Active Directory Domain Services (AD DS) domain. All client computers run Windows 8 and are members of the domain. Client computers maintain a list of sites in the Internet Explorer Restricted Sites security zone.

Users of one client computer are able to download and install an application from a site within the Restricted Sites zone.

You need to ensure that users of the computer can install applications only from sites that are not in the Restricted Sites zone.

What should you do?

- A. Run the `Get-AppLockerPolicy Windows PowerShell` cmdlet.
- B. Add the blocked application as an additional AppLocker rule to the GPO that configures AppLocker.
- C. Configure the Software Restriction Policy settings in the local Group Policy of the computer.
- D. Add the blocked application as a software restriction policy to the GPO that configures AppLocker.
- E. Run the `Set-Execution Policy Windows PowerShell1` cmdlet.

Correct Answer: D
