QUESTION: 79

Which permission should you choose to allow a user to call a service?

- A. START_STOP_PERM
- B. SUPERVISOR_PERM
- C. READ_PERM
- D. INVOKE_PERM

Answer: D

QUESTION: 80

You are configuring the security of a service. What is the purpose of the Run As option?

- A. It defines the permissions of the person running the service.
- B. It defines the permissions of the person invoking the service.
- C. It defines the runtime identity used to invoke the service.
- D. It defines the runtime identity used by a service after it has been invoked.

Answer: D

QUESTION: 81

You have a process called MyProcess within an application called MyApp. The process has a SOAP endpoint enabled. The application is deployed on a LiveCycle ES2 server hosted on the local machine with the HTTP service available on port 8080. Which URL should you use to produce a WSDL for this process?

- A. http://localhost:8080/soap/services/MyProcess?wsdl&lc_version=9.0.0
- B. http://localhost:8080/soap/services/MyApp/MyProcess?wsdl&lc_version=9.0.0
- C. http://localhost:8080/services/soap/MyProcess?wsdl&lc_version=9.0.0
- D. http://localhost:8080/services/soap/MyApp/MyProcess?wsdl&lc_version=9.0.0

Answer: B

QUESTION: 82

Which data transfer protocol is used by a connection to a LiveCycle Remoting endpoint?

- A. HTTP
- B. SOAP
- C. WSDL
- D. AMF

Answer: D

QUESTION: 83

You want to debug a process that you have deployed. What should you do?

- A. In Workbench, right click the process select, validate and check validation report.
- B. In Workbench, invoke the process, and check the process running instance on AdminUI
- C. In Workbench, start recording of process, then invoke it. Using playback to check the steps.
- D. In Workbench, edit the process and add scripting action to type out log information. Invoke the process, and check log report.

Answer: C

QUESTION: 84

How do you view the value of a complex variable in a recording?

- A. Click the ellipse button in the Variables view
- B. Complex variables cannot be recorded
- C. Values are displayed directly in the Variables view
- D. The complex variable must be marked as input or output

Answer: A

QUESTION: 85

You need to debug a process using record and playback. Which debug options are available?

- A. The value of the variables and the route followed.

- B. The value of the variables and conditional breakpoints.
- C. The value of the variables, conditional breakpoints, and the route followed.
- D. The value of the variables, and the ability to modify the value of the variables.

Answer: A

QUESTION: 86

What can be done with the variable logger service?

- A. Log the values for selected process variables at a given point in the process
- B. Log the values for all process variables at a given point in the process
- C. Log the values for selected process variables at all points in the process
- D. Log the values for all process variables at all points in the process

Answer: B

QUESTION: 87

You are debugging a process with the variable logger service. To which locations can you write the debug information?

- A. System logger, Standard Out.
- B. System logger, Standard Out, and File Directory.
- C. File Directory.
- D. Standard Out, File Directory.

Answer: B

QUESTION: 88

A process fails while running in a production environment. Which should you verify as a first step in determining the problem?

- A. Application server log file
- B. Database log file
- C. Configuration manager log file
- D. Application server boot log file

Answer: A

QUESTION: 89

Where should you look to determine the current memory usage of your LiveCycle server?

- A. BAM Workbench.
- B. Health Monitor.
- C. Process Management Server Settings.
- D. Core System Settings.

Answer: B
