Version: 9.0

Question: 1

What Watson solution can answer common support questions typically handled by a live agent?

- A. Tone Analyzer
- B. Watson Assistant
- C. Natural Language Understanding
- D. Language Translator

Answer: C

Question: 2

An AI solution is implemented to detect what the user wants to do. The user mentions that he wants to buy a ski jacket for an upcoming vacation in Colorado.

How can the entities be derived from the conversation using IBM Watson services?

- A. Upload training data to the Discovery service and use the Discovery API to query the results
- B. Use the Tone Analyzer service to retrieve the level of openness in the utterance
- C. Pass the utterance from the user to the Natural Language Understanding service Entities API
- D. Pass the utterance from the user through Speech to Text then apply Tradeoff Analytics

Answer: C

Question: 3

What are examples of the information the IBM Watson Natural Language Understanding service extract from html, or web-based content when it analyzes entities?

- A. text and title information
- B. people, companies, organizations
- C. subject-action-object relations
- D. topic keywords

Answer: C

Question: 4

Built into the IBM Watson Discovery service is the Watson Discovery News data set. How is this collection different from other collections?

- A. The Watson Discovery News configuration and documents cannot be adjusted
- B. Documents from the Watson Discovery News collection can be ingested as sample documents to better configure a private collection
- C. The Watson Discovery News collection is specific to the company news domain, whereas a collection is specific to a domain.
- D. The Watson Discovery News data set and a private collection can be queried with a single query call

Answer: B

Question: 5

Which IBM Watson service is pre-trained and does not allow for any customization?

- A. Tone Analyzer
- B. Discovery
- C. Natural Language Classifier
- D. Speech to Text

Answer: C

Question: 6

When building a dialog within the IBM Watson Assistant service, what does the dollar sign \$ represent?

- A. Shorthand syntax for accessing the dialog context.variable_name.
- B. The \$ syntax is meaningful when used with the asterisk * for building and utilizing JSON within Watson dialog response
- C. Describes replacement of context by user_response within the Watson Assistant dialog
- D. Replaces a word or set of words in the position the \$ occupies

Answer: C

Question: 7

What is the purpose of the IBM Watson Natural Language Classifier service?

- A. Interpret the intent behind text and returns a corresponding classification with associated confidence levels
- B. Reduce the number of random utterances consideration, by obtaining a set of uncorrelated utterances
- C. Translate a natural language sentence into a syntactic representation such as a parse tree
- D. Group a set of objects in such a way that objects in the same group are more similar to each other than to those in other groups

Answer: A

Explanation:

IBM Watson Natural Language Classifier is a service that enables developers without a background in machine learning or statistical algorithms to create natural language interfaces for their applications, interprets the intent behind text and returns a corresponding classification with associated confidence levels and the return value can then be used to trigger a corresponding action, such as redirecting the request or answering a question.

Question: 8

A classifier for identifying the ACME corporation logo in images posted on social media runs on 100 images. There are 75 true positives, 3 false positives and 1 false negative and 21 true negatives. Which statement is true?

- A. The classifier has a low precision and a high recall
- B. The classifier has a low precision and a low recall
- C. The classifier has a high precision and a high recall
- D. The classifier has a high precision and a low recall

Answer: C

Question: 9

Which statement is the best definition of intent in the context of a virtual assistant?

- A. Intent is the classification of the inputted question
- B. Intent is the specific class of object that is relevant to a user's purpose
- C. Intent is used to figure out if other IBM Watson AI services are required
- D. Intent is the answer to the inputted question

Answer: A

Question: 10

How is training data set constructed from user questions for the Natural Language Classifier?

- A. Use an XML formatted data set
- B. Upload documents with similar questions
- C. Group the questions and label as classes
- D. Create and intents index in a spreadsheet

Answer: C
