QUESTION: 54
Which two items are true about automatic database backups via Tivoli Storage Manager?

A. Automatic backups are invoked as online backups excluding transaction logs.
B. The backup image includes OS user account and group settings as well as DB2 registry values.
C. IBM Tivoli Storage Manager must be configured only before the database is created to use this function.
D. IBM Tivoli Storage Manager must be configured before the instance that hosts the database is created to use this function.
E. The maximum number of backup images that can be stored is seven; after this the oldest image is deleted automatically when a new image is created.

Answer: D, E

QUESTION: 55
There are an even number of members in a pureScale cluster. What happens to the pureScale cluster if half of the members and the primary Cluster Caching facility (CF) fail simultaneously and the remaining CF is in peer state?

A. The cluster would stay online only if a tiebreaker disk was configured.
B. The cluster would go offline because primary Cluster caching facility failed.
C. The remaining member and standby cluster caching facility would also be shutdown and restarted.
D. The cluster would remain online only if the I/O for failed members is fenced off using SCSI Persistent reserve protocol.

Answer: C

QUESTION: 56

A user is not able to delete an instance. What could be the cause of this failure?

A. The user is not the instance owner.
B. The user does not have the 'AH' privilege.
C. The user does not have the 'Write' privilege.
D. The user does not have the 'Delete' Privilege.

Answer: A
