## Version: 4.0

Question: 1	
Which of the following can be accomplished by altering a table to use colu	umn access control?
A. Restrict the access to specific rows for all or some users B. Hide column definitions from the DB2 catalog table SYSIBM.SYSCOLUM C. Pre-materialize a view with the changed values provided by the column D. Modify the values returned for table columns based on column maskin	n mask
	Answer: D
Question: 2	
Which of the following is an advantage of role-based security?	
A. If you DROP a role that owns objects, those objects will also be dropped B. Within a trusted connection. DB2 allows multiple roles to be associated any point in time  C. Roles are used to provide a more flexible technique than security groassigning and controlling authorization  D. If a role creates an object, a user requires no additional privileges to accuse that role as the object owner in the SQL statement	ed with any given thread at oup definitions or userids in
	Answer: A
Question: 3  For best DB2 lock avoidance, which of the following BIND/REBIND option REBIND command execution?  A. ACQUIRE(USE)ISOLATION(CS) B. ACQUIRE(USE)ISOLATION(RR) C. CURRENTDATA(NO)ISOLATION(CS) D. CURRENTDATA(YES) ISOLATION(CS)	ns should be included in the
	Answer: C
Explanation:

Question: 4	
Which authority prevents unintended access to user data but allows DB2 subsystem?	installation or migration of a
A. SYSADM B. SYSCTRL C. Installation SYSADM D. Installation SYSOPR	
	Answer: D
Explanation: <a href="https://www.ibm.com/support/knowledgecenter/SSEPEK 12.0.0/inst/sstallation">https://www.ibm.com/support/knowledgecenter/SSEPEK 12.0.0/inst/sstallation</a> You are not required to use the SYSADM or installation SYSADM at a Db2 subsystem. Instead, you can use the installation SYSOPR authority migration tasks while preventing unintended access to user data.	uthority to install or migrate
Question: 5	
Which of the following is TRUE about the SYSCTRL authority?	
<ul><li>A. It is designed to allow access to all data directly in DB2</li><li>B. It is designed not to be a part of the administrative authorizations</li><li>C. It is designed so group privileges cannot be granted to SYSCTRL</li><li>D. It is designed to be an administrator in a system with sensitive data</li></ul>	
	Answer: D
Explanation:	

The SYSCTRL authority is designed for administering a system that contains sensitive data. With the SYSCTRL authority, you have nearly complete control of the DB2® subsystem. However, you cannot access user data directly unless you are explicitly granted the privileges to do so.
