Version: 8.0

Question: 1

In a clustered environment with multiple nodes, an SSLHandshakeException occurs with the message "No trusted certificate found." while calling a 3rd party payment provider for payments. In order for WAS runtime to use SSL, it must obtain the 3rd party payment provider's signing certificate.
Which recommended step will resolve this issue?

A. Obtain the signing certificate directly from the server by using the "import from port" option to the trust stores at each Node level
B. Obtain the signing certificate directly from the server by using the "retrieve from port" option to the trust stores at the Ceil level
C. Obtain the signing certificate directly from the server by using the "retrieve from port" option to the key stores at each Cell level
D. Obtain the signing certificate directly from the server by using the "retrieve from port" option to the key stores at each Node level

Answer: B

Question: 2

An administrator is configuring WebSphere Commerce Search using Advanced Configuration mode. Refer to the following image.

Which two of the following tasks must be performed to ensure that a proper deployment configuration exists in the production environment? (Select two.)

A. Always route live traffic to the primary node

B. Ensure that the replication configuration in the Master index points to each Slave search server
C. Expose the Master index externally
D. Configure WebSphere Commerce to point to the search cluster for search requests
E. Configure Search administration requests to point to the Master index

Answer: B, D

Question: 3

After federating a WebSphere Commerce environment, an administrator proceeds with the task of WebSphere Commerce clustering. While creating the new cluster, in order to use cluster level resources, what must the administrator do first?

A. Use WAS administration console to specify how the cluster's resources (for example, data sources) will be created initially
B. Use WAS administration console to synchronize changes with Nodes
C. Use wsadmin with createClusterMember in interactive mode to present all valid values for the resourcesScope parameter
D. Use wsadmin with createCluster in interactive mode to present all valid values for the resourcesScope parameter

Answer: B

Question: 4

After creating an extended site store using the WebSphere Commerce Administration Console, an administrator notices that the store is not accessible as it is closed.
Which two of the following tools can be used to open the store? (Select two.)

A. Configuration Manager
B. WebSphere Commerce Accelerator
C. Organization Administration Console
D. Management Center for WebSphere Commerce
E. WebSphere Commerce Administration Console

Answer: B, E

Question: 5

WebSphere Commerce allows an administrator to define the characteristics of passwords and accounts to comply with a customized security policy for a particular site.
Which password and account characteristics can be modified using the WebSphere Commerce Administration Console?

A. Ability to specify whether a locked account must be unlocked manually by an administrator
B. Ability to prohibit the use ofword(s)and or phrase(s) found in the dictionary

C. Ability to specify the maximum length of a password
D. Ability to specify the number of times a password must be changed before it can be reused

Answer: D

Question: 6
