Question: 1

In CA AppLogic, a class definition consists of a class descriptor and one or more class volumes. What does a class volume contain?

- A. A reference to a storage Logical Unit Number (LUN)
- B. All the software required to boot and operate an instance of this class
- C. A reference to the IP address or host name of the commodity server on which the object is stored
- D. The characteristics of the appliance as a component, including its inputs, outputs, configuration properties, and their default values and hardware resources

Answer: B

Question: 2

The WS_API enables you to perform useful functions, such as:

- A. Migrating users from CA AppLogic versions before r3.0.
- B. Implementing a WebX4 Linux cluster as an assembly of appliances.
- C. Integrating CA AppLogic with CA Access Control to protect your web applications.
- D. Invoking commands through the RESTful application programming interface (API).

Answer: D

Question: 3

Which step should you perform when you provision the WS_API?

- A. Edit the input_template.cfg file.
- B. To configure the application, start it immediately after you provision it.
- C. Run the vol manage ws_api_instance:data command and edit the vdcs.conf file.
- D. When prompted for a password for Secure Shell (SSH) access, enter ws_api_usr.

Answer: C

Question: 4

Before removing a server from the grid or replacing a hard disk, to retrieve any virtual volume streams off the server, which command should you run?

- A. vol clean
- B. vol scoop
- C. vol migrate
- D. vol reinstate

Answer: C

Question: 5

When you configure authentication for the Backbone Fabric Controller (BFC):

- A. Make sure that all users access the BFC using the BFC shell only.
- B. Make sure that the bfcaadmin user has read-only access to the database replica directory.
- C. Do not change the default 'root' password, because this is required for a correct configuration.
- D. Add any necessary public SSH keys for users that will access the BFC to the '/root/.ssh/authorized_keys' file.

Answer: D
