# Version: 5.0

---

## Question: 1

---

How can you define a variable that presents its value help hierarchically? Note: There are 2 correct answers to this question.

A. Create a level hierarchy and assign it to the variable.

- Ensure the variable's reference column is the top level of the hierarchy.

B. Create a parent-child hierarchy and assign it to the variable.

- Ensure the variable's reference column is the parent attribute of the hierarchy.

C. Create a parent-child hierarchy and assign it to the variable.

- Ensure the variable's reference column is the child attribute of the hierarchy.

D. Create a level hierarchy and assign it to the variable.

- Ensure the variable's reference column is the leaf level of the hierarchy.

---

**Answer: C D**

---

---

## Question: 2

---

What options do you have to handle orphan nodes in your hierarchy? Note: There are 2 correct answers to this question.

<https://www.certkillers.net>

- A. Assign them to a parent determined by an expression.
- B. Assign them to a leaf level node.
- C. Assign them to an existing node at the root level.
- D. Define them as additional root nodes.

---

**Answer: C D**

---

---

**Question: 3**

---

Why do you use parameter mapping in a calculation view? Note: There are 2 correct answers to this question.

- A. To push down filters to the lowest level calculation views
- B. To convert the data types of input parameters
- C. To pass variable values to external value help views
- D. To assign variables to one or more attributes

---

**Answer: A C**

---

---

**Question: 4**

---

What can you do with shared hierarchies? Note: There are 2 correct answers to this question.

- A. Provide reusable hierarchies for drilldown in a CUBE with star join

- B. Access hierarchies created in external schemas
- C. Provide reusable hierarchies for drilldown in a CUBE without star join
- D. Enable SQL SELECT statements to access hierarchies

---

**Answer: A D**

---

---

**Question: 5**

---

Why would you set the "Ignore multiple outputs for filters" property in a calculation view?

- A. To ensure semantic correctness
- B. To avoid duplicate rows in the output
- C. To force filters to apply at the lowest node
- D. To hide columns that are not required

---

**Answer: C**

---
