Question: 4

What are the features of dynamic analytic privileges?
There are 2 correct answers to this question.
Response:

A. Reuse the same analytic privilege for several users who need to access different data
B. Filter the data based on a variable entered by the user when they query the view
C. Change the filter condition in the underlying tables and views
D. Filter the condition based on a variable entered by the user when they query the view Question:

Answer: A, C

Question: 5

Why do you create a time dimension calculation view?
Please choose the correct answer.
Response:

A. To support temporal joins in a cube calculation view with star schema
B. To enhance a calculation view with a drilldown on a time hierarchy
C. To provide date-based help values for a DIRECT type input parameter
D. To enable time dependency on parent-child hierarchies

Answer: B

Question: 6

Which of the following are characteristics of SAP HANA Smart Data Streaming?
Please choose the correct answer.
Response:

A. It uses databases queries
B. It is a standalone product for use with any target system.
C. It acts based on combinations of events
D. It provides reports and analysis on the received data.

Answer: C

Question: 7

You imported the following objects. Which of them always require an activity from you before they can be built?
There are 2 correct answers to this question.
Response:

CertKillers.net

A. Synonyms definition
B. Multi-target application
C. Logical schema definition
D. SAP HANA database module

Answer: B,D

Question: 8

In a calculation view, what should you consider when you create an input parameter that derives its value from a user-defined function?
There are 2 correct answers to this question.
Response:

A. The input parameter must be set to mandatory.
B. The generated value can be overwritten at runtime.
C. The function can return multiple values
D. The function must be of the type scalar.

Answer: B,D

Question: 9

Which of the following benefits characterize the use of a design time filter?
There are 3 correct answers to this question.
Response:

A. It reduces the result set of data.
B. The filter is applied on the result set of a query.
C. It is defined on the runtime in the SQL query.
D. The filter is applied on the table before the query is executed.
E. It is applied before a table join is executed.

Answer: A,D,E

Question: 10

Why did SAP decide to use CDS for S/4HANA Analytics and not SAP HANA Live?
Please choose the correct answer.
Response:

A. More use cases are available with CDS than with SAP HANA Live.
B. Deeper BI functionality is available with CDS compared to SAP HANA Live.
C. CDS is tied to the application layer for better control of complete source code transportation.
D. Calculation views cannot be used with S/4HANA tables.
