- A. To add OLAP data warehousing capabilities to SAP HANA
- B. To implement an SQL-driven approach to data warehousing
- C. To improve the loading and reporting performance of SAP Business Warehouse
- D. To enable reporting on SAP HANA data using the full suite of SAP Business Objects

Answer: B

Question: 2

What are the rules for defining a stepparent in a hierarchy?

There are 2 correct answers to this question.

Response:

- A. A stepparent only applies to parent-child hierarchies.
- B. The stepparent node must already exist in the hierarchy at any level.
- C. The stepparent node ID must be entered according to the node style you selected for the hierarchy.
- D. The stepparent node must already exist in the hierarchy at the root level.

Answer: C,D

Question: 3

Why should you use variables in SQL Script?

There are 2 correct answers to this question.

Response:

- A. To implement flow control logic
- B. To support processing push-down
- C. To increase parallelization opportunities
- D. To improve code readability

Answer: C, D

Question: 4

What are the features of dynamic analytic privileges?

There are 2 correct answers to this question.

Response:

- A. Reuse the same analytic privilege for several users who need to access different data
 - B. Filter the data based on a variable entered by the user when they query the view
 - C. Change the filter condition in the underlying tables and views
 - D. Filter the condition based on a variable entered by the user when they query the view
- Question:

Answer: A, C

Question: 5

Why do you create a time dimension calculation view?

Please choose the correct answer.

Response:

- A. To support temporal joins in a cube calculation view with star schema
- B. To enhance a calculation view with a drilldown on a time hierarchy
- C. To provide date-based help values for a DIRECT type input parameter
- D. To enable time dependency on parent-child hierarchies

Answer: B

Question: 6

Which of the following are characteristics of SAP HANA Smart Data Streaming?

Please choose the correct answer.

Response:

- A. It uses databases queries
- B. It is a standalone product for use with any target system.
- C. It acts based on combinations of events
- D. It provides reports and analysis on the received data.

Answer: C

Question: 7

You imported the following objects. Which of them always require an activity from you before they can be built?

There are 2 correct answers to this question.

Response:

- A. Synonyms definition
- B. Multi-target application
- C. Logical schema definition
- D. SAP HANA database module

Answer: B,D

Question: 8

In a calculation view, what should you consider when you create an input parameter that derives its value from a user-defined function?

There are 2 correct answers to this question.

Response:

- A. The input parameter must be set to mandatory.
- B. The generated value can be overwritten at runtime.
- C. The function can return multiple values
- D. The function must be of the type scalar.

Answer: B,D

Question: 9

Which of the following benefits characterize the use of a design time filter?

There are 3 correct answers to this question.

Response:

- A. It reduces the result set of data.
- B. The filter is applied on the result set of a query.
- C. It is defined on the runtime in the SQL query.
- D. The filter is applied on the table before the query is executed.
- E. It is applied before a table join is executed.

Answer: A,D,E

Question: 10

Why did SAP decide to use CDS for S/4HANA Analytics and not SAP HANA Live?

Please choose the correct answer.

Response:

- A. More use cases are available with CDS than with SAP HANA Live.
- B. Deeper BI functionality is available with CDS compared to SAP HANA Live.
- C. CDS is tied to the application layer for better control of complete source code transportation.
- D. Calculation views cannot be used with S/4HANA tables.

Answer: A,C
