Question: 1

What accurately describes SDC?

A. Block device driver
B. NAS client
C. Distributed file system client
D. Agent layered on iSCSI initiator software

Answer: A

Question: 2

Which type of ScaleIO deployment is most similar to a traditional SAN topology?

A. Two layer
B. Fully converged
C. Mixed
D. Standalone

Answer: A

Question: 3

In a fully converged ScaleIO deployment, what applies to every server?

A. Contributes to, and benefits from, ScaleIO storage
B. Shares in the creation and maintenance of metadata
C. Uses only one tier of storage, even if many ScaleIO pools exist
D. Runs the same operating system as all other servers

Answer: A

Question: 4

How many protection domains can an SDS belong to?

A. 1
B. 2
C. 8
D. 64

Answer: A

Question: 5

What is the recommended maximum number of SDS nodes in a protection domain?

A. 16
B. 32
C. 64
D. 128

Answer: D

Question: 6

What is a limitation when many protection domains are created with very few SDS servers in each?

A. Achievable performance is limited
B. Mean Time Between Failures is too low
C. Mean Time Between Failures is too high
D. Separate VLAN must be created for each protection domain

Answer: A

Question: 7

What is a characteristic of the ScaleIO rebuild process?

A. Forward rebuild is typically faster because it is many-to-many
B. Backward rebuild is typically faster because it is many-to-many
C. Forward rebuild is typically faster when server outage is short-term
D. Backward rebuild is more efficient when a server recovers after an outage

Answer: A
