Question: 1	
Which is true regarding packets that match a do-not-track policy with the	ne action Track and Allow?
A. Packets are never dropped. B. Source IP addresses are added to the legitimate IP (LIP) table.	
C. Packets are not included in the statistics for threshold estimation.D. Packets are assigned to SPP 0.	
	Answer: A
Question: 2	
Regarding the switching SPP feature, what is used to determine when to an alternate SPP?	FortiDDoS switches the traffic
A. Traffic volume B. Destination IP addresses	
C. Mitigated attacks D. Blocked packets	
	Answer: A
Question: 3	
A FortiDDoS device is connected between a protected server and aggressive aging feature, the administrator must manually add the raddress to the FortiDDoS configuration. Why does the FortiDDoS need to	outer internal interface MAC
A. To send RST packets to the protected server spoofing the router inter B. To allow incoming traffic only from that specific MAC address. C. To determine which traffic direction is incoming and which traffic direction. To allow outgoing traffic only to that specific MAC address.	
	Answer: A

Question:	4

A FortiDDoS administrator wants the configured minimum threshold to act as a hard, fixed threshold. So, FortiDDoS will start dropping packets and mitigating the traffic as soon as the traffic volume goes above the configured minimum threshold, regardless of the values of the other thresholds. What configuration change can be done to achieve this requirement?

- A. Setting the SPP to detection mode.
- B. Changing the adaptive mode to fixed.
- C. Setting the adaptive limit percentage to 100%.
- D. Disabling the adaptive limit threshold.

Answer: C

Question: 5

A FortiDDoS device must be deployed as soon as possible in a customer network that is currently under a DDoS attack. Which values are recommended to use for the configured minimum thresholds?

- A. The factory default values.
- B. The factory default values increased by a percentage that depends on the customer traffic volume.
- C. The easy setup values.
- D. The system recommended values after a one-hour learning period.
