Question: 1

How does Vertica implement high availability in a clustered environment?

- A. full replicas of fact tables and segmented dimension tables
- B. full replicas of all data on all nodes
- C. built-in redundancy of data
- D. continuous mirroring of data

Answer: B

Question: 2

During Vertica installation, how do you install onto multiple nodes of a cluster?

- A. You must install the application individually on each node
- B. Run the installation script from the Console machine once per node.
- C. Pass the IP address or node names as part of the -s argument, and it will install the application on
- D. each node,
- E. Pass the IP addresses or node names to spread and it will install the application on each node.

Answer: C

Question: 3

What are the benefits of ordering data in projection design? (Select two.)

- A. It enables optimum encoding.
- B. It enables partitioning of data.
- C. It enables efficient sharing of data between similarly-ordered projections.
- D. , It enables efficient application of query predicates.
- E. It enables segmentation of data.

Answer: BD

Question: 4

What are characteristics of projections in Vertica? (Select three.)

- A. A projection can contain data from one or more source tables.
- B. A projection can contain data from only one source table.
- C. A projection can contain a subset of rows from the source table.
- D. Each projection contains all rows from the source table.
- E. A projection can contain a subset of columns from the source table.
- F. Each projection contains all columns from the source table.

Answer: BCF

Question: 5

What is the purpose of Vertica's transaction model? (Select three.)

- A. Transactions mean that undo logs are not needed.
- B. Transactions are used to maintain partitions.
- C. Transactions are only written upon an explicit commit being issued
- D. Transactions are used for data recovery.
- E. Transactions are used to delete data.
- F. Transactions are used to maintain segmentation.

Answer: BEF
