## Question: 1

---

Which NetApp Cloud Manager add-on service enables you to back up on-premises volumes and NetApp Cloud Volumes ONTAP volumes to object storage?

- A. Cloud Insights
- B. Cloud Backup
- C. SnapLock
- D. Cloud Compliance

---

**Answer: B**

---

Explanation:

Reference: [https://docs.netapp.com/us-en/occm/concept\\_backup\\_to\\_cloud#limitations](https://docs.netapp.com/us-en/occm/concept_backup_to_cloud#limitations)  
Cloud Backup is a service that enables you to back up and restore data from on-premises or cloud-based NetApp storage systems to low-cost object storage. [It supports both NetApp ONTAP and NetApp Element software. Reference: 1](https://docs.netapp.com/us-en/occm/concept_backup) [https://docs.netapp.com/us-en/occm/concept\\_backup](https://docs.netapp.com/us-en/occm/concept_backup)

---

## Question: 2

---

You are helping to deploy a new cloud application. Over time, cloud resource requirements will likely grow and could become costly. Your manager asks you to collect cost data and determine how to optimize costs.

In this scenario, which NetApp product would enable you to fulfill this request?

- A. Cloud Compliance
- B. Cloud Volumes ONTAP
- C. Cloud Volume service
- D. Spot Cloud Analyzer by NetApp

---

**Answer: D**

---

Explanation:

Reference: <https://spot.io/products/cloud-analyzer/>

Spot Cloud Analyzer by NetApp is a product that helps you monitor, analyze, and optimize your cloud infrastructure costs across multiple cloud providers and accounts. [It provides visibility into your cloud spending patterns, identifies cost-saving opportunities, and recommends actions to reduce your cloud bills. Reference: 2](https://spot.io/products/cloud-analyzer/) <https://spot.io/products/cloud-analyzer/>

---

**Question: 3**

---

Your company has decided to move an on-premises application to the cloud. The application's data is currently stored locally on a physical Red Hat Enterprise Linux (RHEL) server.

Which NetApp solution would be used to migrate this data to an Azure NetApp Files volume?

- A. SnapVault
- B. Cloud Sync
- C. SnapMirror
- D. AzCopy

---

**Answer: B**

---

Explanation:

Cloud Sync is a NetApp service that enables you to synchronize data between different sources and targets, such as on-premises file servers, NFS or CIFS shares, cloud storage services, or Azure NetApp Files volumes. [It supports various protocols and formats, including RHEL servers. Reference: 3 https://docs.netapp.com/us-en/cloud-sync/index](https://docs.netapp.com/us-en/cloud-sync/index)

---

**Question: 4**

---

What are two main benefits when configuring Advanced Disk Partitioning (ADP) on an AFF or FAS system? (Choose two.)

- A. Increases deduplication efficiencies.
- B. Reduces the RAID parity overhead.
- C. Decreases disk failure rate.
- D. Optimises storage capacity.

---

**Answer: BD**

---

Explanation:

Advanced Disk Partitioning (ADP) is a feature that enables you to partition each disk into two partitions: one for data and one for root aggregates. This reduces the number of disks required for root aggregates and increases the number of disks available for data aggregates, thus reducing the RAID parity overhead and optimizing the storage capacity. Reference: [https://docs.netapp.com/us-en/ontap/concept\\_adp\\_overview](https://docs.netapp.com/us-en/ontap/concept_adp_overview)

---

**Question: 5**

---

Which two statements are true regarding an ONTAP Select deployment? (Choose two.)

- A. Multiple nodes from a single ONTAP Select cluster should not run on the same hypervisor host.
- B. You can add an ONTAP Select node directly to a NetApp engineered hardware ONTAP cluster.
- C. The hypervisor host is running either VMware ESXi or Red Hat KVM.
- D. Each hypervisor host within an ONTAP Select cluster can run a different version or release of the hypervisor software.

---

**Answer: A, C**

---

Explanation:

A is true because running multiple nodes from the same cluster on the same host can compromise availability and performance. C is true because VMware ESXi and Red Hat KVM are the supported hypervisors for ONTAP Select deployment.
