Version: 10.0

Question: 1

Click the Exhibit button.

Platform Mixing Rules				
Platform Model	Maximum Nodes (NAS) [1]	Maximum Nodes (SAN) [1]	Min ONTAP Version for Platform Mixing	
⊟ Fabric Attached Storage – Current Models				
FAS2620	24 Nodes	12 Nodes	9.3	
FAS2650	24 Nodes	12 Nodes	9.3	
FAS8200	24 Nodes	12 Nodes	9.3	
FAS9000	24 Nodes	12 Nodes	9.3	
⊞ All Flash FAS – Current Models				
⊟ Fabric Attached Storage – Legacy EOA Models				
FAS2520	4 Nodes	4 Nodes	9.3	
FAS2552	8 Nodes	8 Nodes	9.3	
FAS2554	8 Nodes	8 Nodes	9.3	
FAS8020	24 Nodes	12 Nodes	9.3	
FAS8040	24 Nodes	12 Nodes	9.3	
FAS8060	24 Nodes	12 Nodes	9.3	
FAS8080 EX	24 Nodes	12 Nodes	9.3	
⊞ All Flash FAS – Legacy EOA Models				

Footnotes	
Notes ID ▲	Notes Description
1	Maximum number of nodes within a cluster is determined by platform which supports the fewest number of nodes

A storage administrator has an existing FAS2554 HA pair. They want to add a new FAS2620 HA pair to the cluster. The SAN protocols are licensed.
Referring to the exhibit, after adding the second HA pair, how many more nodes are available to add for future use?

A. 4
B. 12
C. 8
D. 2

Answer: A

Question: 2

When a write from a SAN host is received, the information is stored within the controller before it is

written to the underlying RAID.
In this scenario, which component stores the data?

A. HBA
B. FlashCache
C. Flash Pool
D. NVRAM

Answer: D

Question: 3

An administrator notices that the applications are running slowly. The administrator wants to determine which component on the ONTAP subsystem is experiencing the most latency.
In this scenario, which command would you use to accomplish this task?

A. run -node * stats show system::sys_avg_latency
B. statistics system show
C. run -node * -command sysstat -x 1
D. qos statistics latency show

Answer: D

Question: 4

A customer has four or more nodes in a cluster. More than four target ports are being used by the SVMs in any node. The customer wants to limit the number of paths that can be used to access LUNs on the nodes, so that the paths do not exceed the recommended maximum of eight.
In this scenario, which three actions will accomplish this task? (Choose three.)

A. Use ALUA protocol.
B. Use multipathing software.
C. Use port sets for iSCSI.
D. Use Selective LUN Mapping
E. Use FC switch zoning.

Answer: C,D,E

Question: 5

A customer configured CIFS in an ONTAP 9.5 SVM. The customer wants to verify if the "CIFS Server" is accessible from each node of the cluster.
In this scenario, which command will accomplish this task?

A. vserver cifs session
B. vserver cifs connection show

C. vserver cifs check
D. vserver cifs domain discovered-servers

Answer: C

Question: 6

Click the Exhibit button.

```
::> vserver export-policy rule create -vserver vsl -policyname test

-clientmatch 10.64.18.0/24 -rorule any -rwrule any -protocol nfs3 -ruleindex 1 -
anon 70

The rule created above is verified by using the command that follows:

::> vserver export-policy rule show

 Vserver      Policy       Rule        Access       Client                        RO
              Name         Index       Protocol     Match                         Rule
 ---------    ---------    ---------   ---------    ---------                     --------------

 vs1          test         1           nfs3         10.64.18.0/24                 any
```
An export policy rule for a volume is set by using the command shown in the exhibit.
If clients with IP addresses 10.64.19.0 and 10.64.18.20 accessed the export, what is the outcome?

A. Neither client is given access.
B. Client 10.64.19.0 is given access but 10.64.18.20 is not given access.
C. Client 10.64.19.0 is not given access but 10.64.18.20 is given access.
D. Both clients are given access.

Answer: C

Question: 7

Click the Exhibit button.

```
::> network port broadcast-domain show -broadcast-domain Default

IPspace          Broadcast                                         Update
Name             Domain Name    MTU       Port List                Status Details
-----------      -----------    --------  ------------------       -----------
Default          Default        1500

                                          node01:e0c               complete
                                          node01:e0d               complete
                                          node02:e0c               complete
                                          node02:e0d               complete

::> network interface failover-groups show

Vserver               Group              Failover
                                         Targets
---------------       ---------------    ----------------------------------------
cluster1
                      Default
                                         node01:e0c, node01:e0d
                                         node02:e0c, node02:e0d
                      e0c
                                         node01:e0c, node02:e0c
                      e0d
                                         node01:e0d, node02:e0d

::> network interface show -vserver SVM1 -fields home-node, home-port, failover-
group, failover-policy

vserver     lif     home-node        home-port   failover-policy   failover-group
-------     ----    -------------    ---------   ---------------   --------------
SVM1        LIF1    node01           e0c         system-defined    Default
SVM1        LIF2    node02           e0d         system-defined    e0d
SVM1        LIF3    node01           e0c         system-defined    e0c
SVM1        LIF4    node02           e0d         local-only        Default
```

Referring to the exhibit, to where will LIF4 move if you unplug the cable from node02 port e0d?

A. node01 port e0c
B. node02 port e0c
C. node02 port e0d
D. node01 port e0d

Answer: D

Question: 8

To which three objects on an ONTAP 9.3 cluster would you assign a QoS throughput floor? (Choose three.)

A. a volume on FAS
B. a LUN on AFF
C. a volume on AFF

D. an SVM on AFF
E. a file on AFF

Answer: B,C,E

Question: 9

Click the Exhibit button.

```
IPspace          Vserver List                              Broadcast Domains
------------     -----------------------------------       --------------------------
Cluster
                 Cluster                                    Cluster
Default
                 svm1, svm2,                                Default
                 cluster1
IPspace1
                 SVM1A, SVM2A,                              IPspace1
IPspace2
                 SVM2A, SVM2B,                              IPspace2
```

You execute the cluster1::> network ipspace show command, and notice that two IPspaces are not able to be renamed or deleted.
Referring to the exhibit, what are these two IPspaces? (Choose two.)

A. IPspace1
B. Default
C. IPspace2
D. Cluster

Answer: B,D

Question: 10

A storage administrator has a single-node FAS cluster. The administrator wants to add a second node to convert the FAS storage array into a switchless cluster.
In this scenario, what would the administrator do to accomplish the task?

A. Add a new AFF HA pair and replace the existing FAS.
B. Add a cluster interconnect switch and a second FAS of the same model.
C. Add a new single node AFF controller to the existing FAS storage array.
D. Add a new single node FAS controller of the same model.

Answer: D
