IBM InfoSphere Guardium Technical(R) Mastery Test v1

Answer: B

QUESTION: 34
Data is collected through an audit policy that uses an Allow action rule. Which of the following cannot be viewed when reporting on these data?

A. SQL construct
B. SQL timestamp
C. Client IP
D. SQL values

Answer: D

QUESTION: 35
The query builder contains all of the following panes except for:

A. The Entity List
B. The Query Fields
C. The Query ID Selector
D. The Query Conditions

Answer: C

QUESTION: 36
Which of the following is true about Guardium's entitlement reports?

A. Guardium includes a set of built-in entitlement report definitions (i.i e. Oracle) and the ability to create custom entitlement reports for any other relational database.
B. Guardium does not offer standard built-in entitlement reports and the user must create these reports based on their database specifications.
C. Guardium includes Oracle entitlement reports as a standard feature, however reports for all other database engines (i.i e. IBM DB2) can be downloaded via a subscription service.
D. Guardium's entitlement reporting is an optional feature that requires a separate license.

Answer: A

QUESTION: 37
What is a Guardium vulnerability assessment (VA)?

A. A test that employs state-of-the-art algorithms to determine the potential risks of your network.
B. A series of predefined and custom tests that allow customers to automatically identify and address database vulnerabilities.
C. An optional service from Guardium where a security specialist visits a customer's site before a proof-of-concept engagement to determine the customer's specific requirements.
D. A piece of software distributed as a multi-platform plug-in that allows a supported database management system to constantly monitor potential threats and report on these periodically.

Answer: B

QUESTION: 38
What are the four types of tests that can be used in a Guardium vulnerability assessment?

A. User defined, observed behavioral, database configuration and server configuration
B. Predefined, subscription-based, observed behavioral and configuration vulnerability
C. OS-level, native, special and external
D. OS-level, kernel, special and external

Answer: A

QUESTION: 39
What is Guardium's Database Protection Subscription Service?

A. A service that may be purchased separately in order to enable Guardium to safeguard database management systems other than Sybase AES.
B. A subscription to the latest updates for the various Guardium product components.
C. An additional package required for the vulnerability and threat management solutions to integrate with CAS.

D. A service that provides the Guardium instance with quarterly updates to its built-in assessment tests, so the assessment is up-to-date with industry best practices and new vulnerabilities.

Answer: D

QUESTION: 40
A database known to contain the medical records of a foreign head of state is accessed at 1:30AM. No security mechanism is installed and so this highly sensitive information is leaked to the medi a. Could this breach have been detected by running a Guardium vulnerability assessment without creating any custom assessment tests?

A. No, this type of test is not included with Guardium.
B. Yes, but only if the appliance includes Guardium's Database Protection Subscription service.
C. Yes, after hours login detection is one of the standard behavioral vulnerability tests included with Guardium.
D. Yes, however this particular test is only available for IBM DB2 and Informix servers.

Answer: C
