analyze the data daily.

Version: 29.2

Topic 1, Exam Pool A
Question: 1
A company collects temperature, humidity, and atmospheric pressure data in cities across multiple
continents. The average volume of data collected per site each day is 500 GB. Each site has a high-speed

internet connection. The company's weather forecasting applications are based in a single Region and

What is the FASTEST way to aggregate data from all of these global sites?

- A. Enable Amazon S3 Transfer Acceleration on the destination bucket. Use multipart uploads to directly upload site data to the destination bucket.
- B. Upload site data to an Amazon S3 bucket in the closest AWS Region. Use S3 cross-Region replication to copy objects to the destination bucket.
- C. Schedule AWS Snowball jobs daily to transfer data to the closest AWS Region. Use S3 cross-Region replication to copy objects to the destination bucket.
- D. Upload the data to an Amazon EC2 instance in the closest Region. Store the data in an Amazon Elastic Block Store (Amazon EBS) volume. Once a day take an EBS snapshot and copy it to the centralized Region. Restore the EBS volume in the centralized Region and run an analysis on the data daily.

	Answer: A
Explanation:	
ou might want to use Transfer Acceleration on a bucket for various reasons	, including the following:
ou have customers that upload to a centralized bucket from all over the wo	orld.
ou transfer gigabytes to terabytes of data on a regular basis across continer	nts.
You are unable to utilize all of your available bandwidth over the Internet wl	hen uploading to Amazon S3.
https://docs.aws.amazon.com/AmazonS3/latest/dev/transfer-acceleration	
nttps://aws.amazon.com/s3/transfer- acceleration/#:~:text=S3%20Transfer%20Acceleration%20(S3TA)%20reduces %20applications:	s,to%20S3%20for%20remote
'Amazon S3 Transfer Acceleration can speed up content transfers to and from 50-500% for long-distance transfer of larger objects. Customers who have eisapplications with widespread users or applications hosted far away from the ong and variable upload and download speeds over the Internet"	ther web or mobile
nttps://docs.aws.amazon.com/AmazonS3/latest/userguide/mpuoverview	

roved throughput - You can upload parts in parallel to improve throughput."		
Question: 2		
A company needs the ability to analyze the log files of its proprietary application. The logs are stored in JSON format in an Amazon S3 bucket Queries will be simple and will run on-demand A solutions architect needs to perform the analysis with minimal changes to the existing architecture What should the solutions architect do to meet these requirements with the LEAST amount of operational overhead?		
A. Use Amazon Redshift to load all the content into one place and run the SQL queries as needed		
B. Use Amazon CloudWatch Logs to store the logs Run SQL queries as needed from the Amazon CloudWatch console		
C. Use Amazon Athena directly with Amazon S3 to run the queries as needed		
Use AWS Glue to catalog the logs Use a transient Apache Spark cluster on Amazon EMR to run the SQL eries as needed		
Answer: C		
Explanation:		

Question: 3	

Amazon Athena can be used to guery JSON in S3

A company uses AWS Organizations to manage multiple AWS accounts for different departments. The management account has an Amazon S3 bucket that contains project reports. The company wants to limit access to this S3 bucket to only users of accounts within the organization in AWS Organizations.

Which solution meets these requirements with the LEAST amount of operational overhead?

- A. Add the aws:PrincipalOrgID global condition key with a reference to the organization ID to the S3 bucket policy.
- B. Create an organizational unit (OU) for each department. Add the aws:PrincipalOrgPaths global condition key to the S3 bucket policy.
- C. Use AWS CloudTrail to monitor the CreateAccount, InviteAccountToOrganization, LeaveOrganization, and RemoveAccountFromOrganization events. Update the S3 bucket policy accordingly.
- D. Tag each user that needs access to the S3 bucket. Add the aws:PrincipalTag global condition key to the S3 bucket policy.

Answer: A

Explanation:

https://aws.amazon.com/blogs/security/control-access-to-aws-resources-by-using-the-aws-organization-of-iam-principals/

The aws:PrincipalOrgID global key provides an alternative to listing all the account IDs for all AWS accounts in an organization. For example, the following Amazon S3 bucket policy allows members of any account in the XXX organization to add an object into the examtopics bucket.

```
{"Version": "2020-09-10",

"Statement": {

"Sid": "AllowPutObject",

"Effect": "Allow",

"Principal": "*",

"Action": "s3:PutObject",

"Resource": "arn:aws:s3:::examtopics/*",

"Condition": {"StringEquals":

{"aws:PrincipalOrgID":["XXX"]}}}
```

https://docs.aws.amazon.com/IAM/latest/UserGuide/reference policies condition-keys

Question: 4

An application runs on an Amazon EC2 instance in a VPC. The application processes logs that are stored in an Amazon S3 bucket. The EC2 instance needs to access the S3 bucket without connectivity to the internet.

Which solution will provide private network connectivity to Amazon S3?

- A. Create a gateway VPC endpoint to the S3 bucket.
- B. Stream the logs to Amazon CloudWatch Logs. Export the logs to the S3 bucket.
- C. Create an instance profile on Amazon EC2 to allow S3 access.
- D. Create an Amazon API Gateway API with a private link to access the S3 endpoint.

	Answer: A
Explanation:	
VPC endpoint allows you to connect to AWS services using a privat Internet	e network instead of using the public
Question: 5	
A company is hosting a web application on AWS using a single Ama uploaded documents in an Amazon EBS volume. For better scalabi duplicated the architecture and created a second EC2 instance and Zone placing both behind an Application Load Balancer After compathat, each time they refreshed the website, they could see one subbut never all of the documents at the same time.	lity and availability, the company I EBS volume in another Availability Dieting this change, users reported
What should a solutions architect propose to ensure users see all c	of their documents at once?
A. Copy the data so both EBS volumes contain all the documents.	
B. Configure the Application Load Balancer to direct a user to the s	erver with the documents
C. Copy the data from both EBS volumes to Amazon EFS Modify the to Amazon EFS	e application to save new documents
D. Configure the Application Load Balancer to send the request to from the correct server.	both servers Return each document
	Answer: C
Explanation:	

https://docs.aws.amazon.com/efs/latest/ug/how-it-works#how-it-works-ec2
